PROSENTER USER MANUAL

Version 1.0

MARCH 23, 2023

General Overview

Prosenter is a simple application that brings presenter-focused features to people that share their screens. Import your script and make sure your audience follows along you software demos, product showcases or anything else you might be presenting.

Uploading a title file

You can either upload a CSV title file (comma delimited) by selecting File - > Import File, or by dragging and dropping a file of the correct format on the main Prosenter window.

The imported columns and rows will then display in the main list.

In order for the import to be correct, you must upload a file with three comma-delimited columns (Numbering, Title and Presentation notes). No headers are required for this file. S sample piece of text is shown below.

> *a),Section a),This is where I store my presenter notes*
>
> *b),Section 2,"If I have commas in my text, I can surround that text with quotes to prevent an accidental break"*

Once the file is properly imported, you will be able to view the data in the main list view. Presenter notes are available on the right side of the application, and are shown when a specific title is highlighted.

Setting up your presentation

Once your titles are imported, click "Start Staging". A new window will appear, containing the longest title you have imported. Use this placeholder to align, position and resize your text and window where you'd like it to appear during your presentation. You can click and drag the window to position it, and a grab handle at the bottom right of the window will let you resize it.

To close the presentation window, press the ■ button .

Note: text is bottom-aligned in this window.

Presenting

After setting up your display, you can now start the presentation by pressing "Start". Your setup window will disappear, and only your title and numbering will remain. These are now static and click through.

You can advance through the elements of your presentation by clicking the up and down arrows (or PAGEUP and PAGEDOWN on your keyboard).

Pausing the presentation will turn the text invisible, allowing you to resume the display at a later time. You can trigger a pause by pressing the "Pause" button at any time, or by pressing the HOME key.

You can stop the presentation at any time by pressing the ■ button or by pressing the END key, which will close the presentation window.
